

4. End-to-End Testing (UI + API + Analysis):

Happy Path Scenario

Test Scenario:

- I. Search for a product (“Art”)
- II. Apply filters:
 - Price Range
 - Category
- III. Sort products by Price (Low → High)
- IV. Add 2 products to cart
- V. Verify cart details
- VI. Proceed to checkout

1. UI Testing Execution

Step No	Test Step	Expected Result	Actual Result	Status	Attachments
1	Search for “Art”	Relevant products should appear	Relevant products displayed	Pass	
2	Apply Price Filter	Products should filter by selected price range	Filter option unavailable	Fail	Link
3	Apply Category Filter	Products should filter by selected category	Category filter unavailable	Fail	
4	Sort products Low → High	Products should sort in ascending order	Sorting works correctly	Pass	Link
5	Add first product to cart	Product should be added successfully	Product added successfully	Pass	Link
6	Add second product to cart	Product should be added successfully	Product added successfully	Pass	Link
7	Open cart and verify items	Correct products and prices should appear	Cart details verified successfully	Pass	Link
8	Proceed to checkout	Checkout page should load successfully	Checkout completed successfully	Pass	1. Link 2. Link

2. API Testing

API ID	API Name	Request Method	Expected Result	Actual Result	Status	Attachments
API_01	Search Product	GET	I. Status Code: 200 OK II. Relevant products returned III. Valid JSON	I. 200 OK Showed II. Relevant “Art” products returned successfully III. JSON returned successfully	Pass	Link
API_02	Apply Price Filter	GET	Products within selected price range should appear	URL query parameters Price=10-30 are ignored by the system. The API/Search engine returns all 6 products (including products priced at €34.80) instead of filtering products strictly between €10 and €30.	Fail	Link
API_03	Apply Category Filter	GET	Relevant category products should return	Filter functionality unavailable	Fail	Link
API_04	Sort Products	GET	Products sorted in ascending order by price	Navigating directly via the search URL with the sorting parameter order=product.price.asc results in a 502 Bad Gateway server error. (But UI works fine)	Fail	Link
API_05	Add Product to Cart	POST	Product should be added to cart successfully	Product added successfully	Pass	Link
API_06	Add Multiple Products	POST	Second product should be added successfully	Second product added successfully	Pass	Link
API_07	Verify Cart	GET	Correct products, quantities, and prices should appear	Cart data verified successfully	Pass	1. Link 2. Link
API_08	Checkout	POST	Checkout should complete successfully	Order placed successfully	Pass	Link
