

Manual QA Assessment

Application Under Test

You will use the demo e-commerce platform:

PrestaShop Demo Front Office ([LINK](#))

Q1 – Customer Login (Sign In) Module

You are working on an e-commerce platform where the client wants to implement a secure and user-friendly **Customer Login (Sign In)** feature. Your responsibility as a QA Engineer is to verify that the login functionality works correctly, securely, and provides a seamless user experience.

Perform complete manual testing of the Sign In module.

Tasks

- Prepare a Test Plan.
- Design comprehensive manual test cases.
- Cover both positive and negative scenarios.
- Include functional, validation, UI, session, compatibility, accessibility, and security testing.
- Execute all prepared test cases.
- Record execution results.
- Identify failed scenarios.
- Report defects with appropriate Severity and Priority.
- Collect screenshots or screen recordings for failed scenarios.
- Prepare a Test Summary Report.

Deliverables

- Manual Test Cases Design
- Test Execution Report
- Test Summary Report
- Defect Report
- Defect Evidence (Screenshots / Videos)

Q2 – Requirement Analysis (Client Questions)

Before implementation, the client wants to ensure that all business requirements (Like **Search, Filter, and Sort features**) are clearly understood. During the client meeting, they mentioned that users should be able to search products and refine results using filters such as **price and category**, along with sorting options.

As a QA Engineer, you are participating in the requirement gathering session.

Tasks

- Prepare **10–15 requirement clarification questions**.
- Arrange questions according to **Priority (High → Low)**.
- Cover business rules, validations, security, usability, and error handling.

Deliverable

Requirement Analysis Document (requirement questions)

Q3 – Test Case Design

The client has approved the requirements, and the development team has completed the implementation.

You are responsible for preparing detailed manual **test cases** based on your understanding from Q2.

Tasks

Write detailed **test cases** for the following features:

- Search
- Filter
- Sort
- Cart
- Checkout

Each test case should include:

- Test Case ID
- Feature
- Test Scenario
- Priority

- Browser
- Preconditions
- Test Data
- Test Steps
- Expected Result

Deliverable

Test Case Design Document

Q4 – Test Execution & Defect Reporting

Now assume that your development team has implemented the feature on the demo site.

Execute all prepared **Q3** test cases and document the execution results.

Tasks

- Execute all test cases.
- Mark each test case as Pass, Fail .
- Record Actual Results.
- Capture evidence for failed scenarios.
- Link related defects with failed test cases.

Deliverables

- Test Execution Report
- Execution Evidence
- Defect Report

Q5 – End-to--End Testing-E2E (UI + API + Analysis)

Now consider a **Happy Path Scenario**:

👉 Search for a product (e.g., “Dress”)

👉 Apply filters:

- Price range
- Category

- 👉 Sort results (Low → High)
- 👉 Add 2 products to cart
- 👉 Proceed to checkout

Tasks

- Execute the full journey using **UI testing**
- Validate related **APIs (using Postman)**
- Provide:
 - Test Analysis
 - Defect Logs
 - Execution Logs

Deliverables

- UI Testing Report
- API Validation Report
- Execution Logs (Postman Collection Runner Report)

Expected Submission

The final assessment submission should contain the following documents:

1. Requirement Analysis
2. Manual Test Cases
3. Test Execution Report
4. Defect Reports
5. Defect Evidence (Screenshots / Videos)
6. Test Summary Report
7. End-to-End Testing Report
